

Solid Step Cote for Patios

Recommended Formulation: 04

Installing an anti skid coating can remove slip and fall situations on your patio at any time of year. Your patio is a frequent source of traffic and if it is exposed to the elements can often become wet and slippery.

Eliminate potential hazards from morning dew, rain, and winter weather.

Furthermore, if someone were to slip and fall and become injured on the patio, porch, steps or other areas of your home that they can sue you for liability. It's a scary thought. But with an application of **Solid Step Cote**, you can eliminate that worry!

Solid Step Cote is the world's only water-based, **GREEN non slip solution** that can be applied to ANY patio or porch surface. It has no odors, fumes or VOC's and will provide years of protection against slippery patios with a simple two-coat application that takes only minutes to apply.

Solid Step Cote 04 is the most coarse formula in the Solid Step family and will provide non slip protection that far exceeds ADA standards. It is the perfect solution to solving slip and fall concerns on the patio of your home or business.
