

## **Solid Step Cote for Pool Decks**

### **Recommended Formulation: 04**

A slippery pool deck can be one of the most dangerous areas of a property due to the constant presence of water and the hard surfaces used to build pool decking, pathways and other adjacent floor surfaces. This combination of factors make the pool deck a very hazardous area when it comes to slip and fall accidents. If you are a homeowner with a pool, a property manager for a condominium or multi-unit housing community, or a facilities manager, Solid Step Cote is the solution for you.

**Solid Step Cote 04** provides a safe, easy and versatile solution to this problem. SolidStepCote can be applied to literally any type of pool decking surface including:

- Travertine
- Stone Pavers
- Tile
- Wood
- Stamped Concrete
- Concrete

Use the same **Solid Step Cote 04** solution for your pool decks as well as the surrounding bathrooms, showers or walkways so you only have to apply one solution to solve all your outdoor non slip needs.

**Solid Step Cote** features built in UV Protection and Mildewcides so your surface will not fade, crack, yellow or develop mold. It is also a waterproof sealer, covering grout lines and concrete from discoloration, mold and mildew.

Our 04 formula offers the coarseness of a 50-grit sandpaper and, due to the use of our proprietary polymer aggregate, does not have any sharp edges that will cause intense abrasion or irritate the feet. It is incredibly easy and safe to apply.

With no fumes, odors, or VOC's, you won't need any masks or special tools to apply the product. Just roll or spray it on, allow it to dry for a few hours, and your new slip resistant pool deck will look beautiful and last for many years before needing reapplication.
