

Solid Step Cote for Warehouses Recommended Formulation: 04

Creating an anti skid flooring surface in a factory or warehouse can literally be a matter of life or death.

A non slip solution for factory or warehouse floors must be rugged, durable and offer a high degree of slip resistance. Generally speaking, these types of floors are concrete and may have some sort of an epoxy finish.

The non-slip solution for these environments must have a very coarse texture and be able to handle a lot of friction from pallets, boxes, foot traffic, fork lifts and the like. **Solid Step Cote 04** has the power to handle just these types of flooring situations and features a water-borne polymer aggregate that is similar to a 50-grit sandpaper. It will hold up to intensive abrasion and provides a coefficient of friction that ranges between 0.85-0.9 in slip meter testing, far beyond ADA standards.

Solid Step Cote can be easily applied by low nap roller in a two coat application. Unlike epoxy non slip solutions, it does not require 24-48 hours of drying time. And unlike epoxy non slip solutions, **Solid Step Cote** features UV protection for areas that may receive direct sunlight so it will not yellow or discolor the floor. Furthermore, **Solid Step Cote** is non-toxic, having no harmful fumes or unpleasant odors. A green, single component solution, **Solid Step** is environmentally responsible and contributes to LEED rating system points.

Protect your factory or warehouse workers from slip and fall accidents and the heavy liabilities that accompany those injuries. Apply **Solid Step Cote** to your floors today and enjoy the peace of mind and financial security that can only come from knowing you have dependable non slip floors in your factory or warehouse.
